Art Unit: 1713

The preliminary amendment of December 7, 2005, has been entered in full.

Claims 1-9 are currently pending and under examination.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. More specifically, the following grounds for indefiniteness apply to the indicated claims.

(A) Claims 1 and 3 respectively recite the limitations "the reactor" and "the polymerization reactor". There is insufficient antecedent basis for these limitations in the claims.

(B) Claim 3 also recites the limitation "the gas phase", which lacks antecedent basis from claim 1.

(C) Regarding claims 2 and 4, a broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions

of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 2 recites the broad recitation "within 0.2°C", and the claim also recites "preferably within 0.1°C," which is a narrower statement of the range/limitation.

Similarly, claim 4 recites the broad recitation "within 0.3 units", and the claim also recites "preferably within 0.2 units," which is a narrower statement of the range/limitation.

(D) Claim 7 provides the limitation "the temperature sensing means". There is insufficient antecedent basis for this limitation in the claims.

The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Mahlo is pertinent to a process for introducing a fast polymerization initiator into a reaction vessel via a controlled stream of an aqueous medium containing small amounts of the initiator (note col. 2, ll. 10+).

Van Swieten et al is pertinent to the dosing of organic peroxides, having a half life from 0.05 hour to 1.0 hour, to a polymerization mixture (note col. 3, ll. 5+).

Claims 1-9 would be allowable if amended or rewritten to overcome the rejection under 35 U.S.C. 112 set forth in this Office action.

Claims 1-9 are free of the prior art of record. Examiner has not, as of the date of this Office action, located or identified any prior art documents that can be used to

render the process defined by said claims anticipated or obvious to a person of ordinary skill in the art. In particular, the limitations to the dosing of at least one peroxide, with a half life in between 1 hour and 0.001 hour, under the conditions i) and ii) as specified in claim 1, are seen to distinguish the claimed subject matter over the prior art.
